

ABSTRACT OF THE DISCLOSURE

A handlebar assembly for bicycle includes a handlebar composed of a central fitting and two wings which are integrally connected to two ends of the central fitting. Two grips are connected to the two wings respectively.

- 5 Two armrests each have a recess defined in an outer periphery thereof and the central fitting of the handlebar is engaged with the recess of each of the two armrests. Two C-shaped members are mounted to the central fitting and two bolts extend through two ends of each of the C-shaped members and are connected to the two armrests. The two armrests are pivotable about the
- 10 central fitting when needed.
